Dear Business Owner, Manager and/or Assistant Manager,

We are a non-profit organization dedicated to protecting the civil liberties of our community members here in Hawai'i. We have been vigilant in researching the extensive science that disputes the government's narrative on the Covid-19 "pandemic". Our website contains a wealth of information.

Did you know that credentialed PhD scientists and MD physicians, who have an alternative view about this so-called pandemic and global crisis, are getting censored in mainstream media? This is a very serious problem that begs the question: why?

We support freedom of speech, freedom of choice, and especially medical freedom to choose what goes into our bodies. There is mounting evidence that this fast tracked Covid-19 "vaccine" can be deadly and in fact cannot even be legally defined as a vaccine because it does not prevent transmission nor does it provide immunity. Additionally the government, the pharmaceutical companies and the doctors and nurses administering this DNA altering toxic shot are free from liability under the PREP Act. However, if companies like yours adopt a policy of Covid-19 vaccination as a condition for continued employment, you may be held personally liable if a vaccine you mandate gives any of your employees an adverse reaction or results in death.

We are urging all businesses to adopt a policy that makes vaccination completely voluntary, with full disclosure of potential health risks and zero threats in keeping their job. Private medical information should always be kept private and vaccination status should never be considered for employment.

We are determined to protect our community and will do a word of mouth and social media campaign to boycott any business that threatens an employee's job if they decline the vaccine. We are watching and listening to our community workers at your business. They are our relatives, neighbors and friends.

Levana Lomma, CEO

Danny Hashimoto, President
