To the Hawai'i State Board of Education Members,

TESTIMONY IN OPPOSITION TO THE PROPOSED RESOLUTION FOR 2021-22 SCHOOL YEAR, TO BE DISCUSSED JUNE 17, 2021

Dear Board Members,

I come to you today not only as an advocate for human rights, fighting for fair and just treatment of our children, but also as a concerned mother whose own child has suffered enormous psychological and physical abuse as a result of policies implemented in the public school system in the 2020-21 school year.

The last 15 months have proven to be difficult for everyone in our state both young and old. The difficulty has not been due to the "Covid-19 pandemic" but rather from the unreasonable government imposed restrictions being placed upon the population that have all but erased the ideas of liberty and bodily autonomy in America. To think that we would even consider another school year of masking our children, enforcing dehumanizing social distancing rules and other psychological abuses is appalling. Particularly when we see nearly every other state in America fully opened with no restrictions whatsoever, with many states outlawing the masking of school children altogether.

The data clearly shows that Covid-19 is not a public health emergency. We have seen fewer deaths from this disease in 15 months than we would normally see from the flu in any given year here in Hawai'i. To maintain that this is a "public health emergency" is irresponsible and

patently false. Children are not at risk of contracting or spreading Covid-19 and are certainly not at risk of dying from it either. So how can we justify continued mitigation tactics that have known risks and harms when there is statistically ZERO threat from the disease itself?

The proposed resolution for the coming school year brings up the intent to encourage vaccination as the #1 focus, maintaining that this is necessary in order to return to full time in person learning. The second focus involves continued promotion of “safety measures”. I am asking you to please consider the following before adopting any resolution that that will keep our children behind masks or force an experimental medical intervention upon them that may result in possible death in exchange for a proper education:

1. There is no immediate threat of severe Covid-19 in the majority of children and adolescents. The survival rate for this age group is 99.9% putting children at ZERO percent statistical chance of dying from Covid-19.¹
2. It has been scientifically confirmed that children are not significant vectors for transmission of Covid-19.²
3. It has been scientifically confirmed that the use of cloth masks and surgical masks by healthy individuals plays no role in reducing the spread of Covid-19 or the mortality rate in any given community environment.³
4. Although scientific evidence supporting facemasks’ efficacy is lacking, adverse physiological, psychological and health effects are established. It has been hypothesized that facemasks have a compromised safety and efficacy profile and should be avoided from use.⁴
5. A group of parents in Gainesville, FL, concerned about potential harms from masks, submitted six face masks to a lab for analysis. The resulting report found that five masks were contaminated with bacteria, parasites, and fungi, including three with dangerous pathogenic and pneumonia-causing bacteria. No viruses were detected on the masks, although the test is capable of detecting viruses.

The analysis detected the following 11 alarmingly dangerous pathogens on the masks:

- Streptococcus pneumoniae (pneumonia)

¹ <https://www.cdc.gov/coronavirus/2019-ncov/hcp/planning-scenarios.html>

² <https://adc.bmj.com/content/105/7/618>

³ <https://www.acpjournals.org/doi/10.7326/M20-6817>

⁴ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7680614/>

- *Mycobacterium tuberculosis* (tuberculosis)
- *Neisseria meningitidis* (meningitis, sepsis)
- *Acanthamoeba polyphaga* (keratitis and granulomatous amebic encephalitis)
- *Acinetobacter baumannii* (pneumonia, bloodstream infections, meningitis, UTIs—resistant to antibiotics)
- *Escherichia coli* (food poisoning)
- *Borrelia burgdorferi* (causes Lyme disease)
- *Corynebacterium diphtheriae* (diphtheria)
- *Legionella pneumophila* (Legionnaires' disease)
- *Staphylococcus pyogenes* serotype M3 (severe infections—high morbidity rates)
- *Staphylococcus aureus* (meningitis, sepsis)

Half of the masks were contaminated with one or more strains of pneumonia-causing bacteria. One-third were contaminated with one or more strains of meningitis-causing bacteria. One-third were contaminated with dangerous, antibiotic-resistant bacterial pathogens. In addition, less dangerous pathogens were identified, including pathogens that can cause fever, ulcers, acne, yeast infections, strep throat, periodontal disease, Rocky Mountain Spotted Fever, and more.⁵

6. It has been scientifically confirmed that social distancing and limitations on capacity play no role in reducing the rate of infection or mortality.⁶ The basis for this regulation has been nothing more than a method to promote technology based learning, which has proven to be a failure for most of the children subjected to this program.⁷

⁵<https://townhall.com/tipsheet/scottmorefield/2021/06/15/a-group-of-parents-sent-their-kids-face-masks-to-a-lab-for-analysis-heres-what-they-found-n2591047>

⁶ <https://www.pnas.org/content/118/17/e2018995118>

⁷ <https://www.cbsnews.com/news/coronavirus-pandemic-students-grades-suffering-all-remote-learning/>

7. It has been scientifically proven that sensory deprivation including the absence of touch, removing facial expressions, stifling voices and preventing other kinesic cues has a negative impact on the overall behavioral and emotional health of small children.^{8 9}
8. It has been scientifically proven that the deprivation of oxygen caused by extended mask wearing causes permanent brain damage and is especially troubling for children whose brains are still developing.¹⁰ Excessive carbon dioxide intake also poses a serious risk to the health of our children and the rebreathing of bacteria can lead to lung infections, staph infections and other serious health issues.^{11 12}
9. The FDA & CDC have not revealed to the public over 20 adverse effects, including Death, related to Covid19 injections, which were discussed in an October 2020 meeting. 5,165 deaths from Covid19 injections are reported by the National Vaccine Information Center as at 06/04/2021, and one-third of the deaths occurred within 48 hours.^{13 14}
10. As of June 13, 2021, the number of vaccine deaths in 2021 exceeded the combined number of vaccine deaths for the past 30 years.¹⁵
11. The extremely low chance of any benefit for healthy children is exactly why pediatricians like Richard Malley, MD, of Harvard, and Adam Finn, MD, PhD, of the University of Bristol, have [passionately written](#) to not "use precious coronavirus vaccines on healthy children." A recent [editorial](#) in *The BMJ* echoed this sentiment -- an argument also [eloquently articulated](#) by *MedPage's* own Vinay Prasad, MD, MPH.¹⁶
12. Pfizer BioNTech's clinical data for children are limited and provide no information on rare but serious adverse effects or long-term safety as well as efficacy. The study included 2,260 children and adolescents, 12-15 years of age, 1,131 of whom received the vaccine. This is a very small number of adolescents and does not permit an evaluation of rare but serious side-effects, such as effects that may happen in only 1:5,000 adolescents.¹⁷

¹⁷ <https://www.pfizer.com/science/clinical-trials/children>

Furthermore, with most of the adolescents followed for only 1 or 2 months after their 2nd dose, there is no data to support long-term safety.

13. All of the Covid-19 vaccines in America are administered under “Emergency Use Authorization” only. An EUA can only be granted when there is no alternative effective treatment available.¹⁸ Evidence has recently surfaced that proves that some of the nation's leading health experts, including Dr. Anthony Fauci has known since as early as 2005 that Chloroquine (a component of the widely available and safe therapeutic known as Hydroxychloroquine) is a potent inhibitor of SARS coronavirus infection and spread, yet this information has been suppressed.¹⁹ The Covid-19 vaccines should have never been granted EUA use under federal law.²⁰
14. Until clinical trials for this vaccine are completed in 2023 this medical intervention remains experimental and investigational. Any human subjects that are to be used for medical experiments must be given full informed consent with the right to refuse to participate. This code of conduct was established at the Nuremberg Trials where a number of doctors and scientists stood trial for crimes against humanity for the atrocities committed during World War II. Any policy which denies the right to informed consent and the right to refuse to be experimented on is considered a war crime and all those engaged in enforcing any such unlawful policy can be held personally liable for damages.²¹
15. Recent studies indicate the spike protein produced in response to the Covid-19 vaccination, itself, may potentially be harmful.²² These studies suggest that the spike protein may bind and interact with various cells throughout the body, via their ACE2 receptors, potentially resulting in damage to various tissues and organs.²³ This risk, no matter how theoretical, must be investigated prior to the vaccination of children and adolescents.

²³ <https://www.mdpi.com/2076-393X/9/1/36/htm>

16. The RT-PCR test most commonly used to detect SARS-Cov-2 is extremely unreliable. It has been reported by the New York Times that 90% of the confirmed positive tests are in fact a false positive.²⁴ This is based on the test's inability to differentiate live viral particles from other materials that may register a positive reading at a high enough cycle threshold though the material is not infectious. This has been confirmed by Dr. Anthony Fauci himself in an interview on "This Week in Virology" where he said, "...If you get [perform the test at] a cycle threshold of 35 or more... the chances of it being replication-confident [aka accurate] are miniscule... you almost never can culture virus [detect a true positive result] from a 37 threshold cycle...even 36..." The standard CT count for labs across America is typically at least 40 cycles.²⁵
17. The theory of "asymptomatic spread" is a false doctrine that did not exist prior to the year 2020 and is merely being used as a method of mind control. A meta analysis of over 54 studies has proven that there is statistically ZERO chance of secondary spread from a positive Covid-19 person showing no symptoms.²⁶

I speak for thousands of parents across the state who have been diligent in following the science, doing their own research to arrive at conclusions based on rational, critical thought. In addition to the sources of information provided here there are countless other studies and peer reviewed research to confirm that masking healthy children is detrimental and unnecessary. There is also extensive research to suggest that the Covid-19 vaccine carries far more risk than benefit to children and we are counting on you to do your part to protect our keiki from harm.

It is clear to see that any continued Covid-19 related mandates in our public schools will be a decision that is driven by politics rather than intent to protect health and we will not stand by and allow this to go on for another school year. We need to end all Covid-19 related "safety measures" immediately and let our children live and breathe freely.

Sincerely,

Levana Lomma, CEO
